

**FOR IMMEDIATE RELEASE:**

**Midrange Software, Inc. Develops a Simple Data-Mining Tool for Payroll Executives**

*The Executive Presentation Module™ for the ITPayS Payroll Management System™ simplifies complex calculations; helping executives get the data they need in seconds to make critical, strategic decisions.*

**Studio City, CA, April 12, 2004** –Midrange Software, Inc., a provider of human resources, payroll and warranty claims field service, has recently announced the **Executive Presentation Module™**, a new data-mining tool for payroll managers to plan their budget allocations. In a time of economic uncertainty, businesses need to know where their money is being spent in order to lower costs. The **Executive Presentation Module™** is the latest addition to Midrange Software's extensive **ITPayS Payroll Management System™**.

The new solution provides executive management with a complete point-in-time analysis of benefit costs, employee salaries, overtime compensation, 401(k) matching, employee insurance or other payroll deductions. The application uses customized matrices to calculate complex calculations in the background, so executives only see the information they need. Reports are generated in seconds by simply specifying a time frame and selecting the data to be analyzed through the use of drop-down menus. As a result, executives are presented with exact dollar figures. The option to conduct "what-if" scenarios help to make cost-effective budget strategies based on current and accurate information.

Strategic initiatives are easily derived from the **Executive Presentation Module™**. For example, an analysis of overtime pay from a single-shift workforce may indicate that it would be more prudent to start a second shift and pay less overtime compensation. Similarly, an analysis of a mutual fund program may indicate that low employee contributions are not meeting minimum requirements and that offering a regular savings plan would reduce company costs. The application presents clear facts and figures in an easily read report to help make critical decisions.

When asked why we developed the **Executive Presentation Module™**, Jacques Ohana, president and CEO of Midrange Software, Inc., revealed, "We couldn't find a sophisticated financial data-mining system to simplify cost allocations so we decided to create one. Plus, we had to make it effortless to use. The **Executive Presentation Module™** was designed 'So Executives Can Understand It and Easily Use It.'"

**About Midrange Software Inc.**

Founded in 1988, Midrange Software Inc. is a leading provider of software solutions for payroll, human resources, manufacturing, and training. The company's applications simplify mission-critical processes for mid-sized and large companies, which include more than 500 customers.
